# ARTEROSIL<sup>HP</sup>

Protect & Restore the Endothelial Glycocalyx\*

The endothelial glycocalyx is the protective non-stick lining of the veins and arteries that inhibits cholesterol and other particles from adhering to or penetrating the endothelial wall. Arterosil HP® is a premier supplement that supports the structure and function of the endothelium's protective lining, and contributes to normal circulation, artery function, and healthy heart and artery walls.

The primary contributors to the breakdown of the endothelial glycocalyx are high blood glucose, oxidative stress, and inflammation. Arterosil HP® utilizes specialized sulfated polysaccharides (SSP) derived from a rare, sustainably sourced seaweed to help maintain the endothelial glycocalyx— and contribute to healthy vascular function.
